Christopher Nobes, Robert B Parker : Comparative International Accounting before purchasing it in order to gauge whether or not it would be worth my time, and all praised Comparative International Accounting:

0 of 0 people found the following review helpful. good book for accounting studyBy meilinathis book is very thick but so full of knowledges of Accounting standards. i think its gonna be fun to read it!!0 of 0 people found the following review helpful. Thorough, but difficult to readBy jsingerMaybe I'm just unfamiliar with the style of a British textbook, but I found it very difficult to follow. The text rambles from one statement to another, with no logical flow, structure or summaries of introduction or conclusion. It's certainly a thorough treatment of the field if your interest is understanding differences in international practice, although it's not targeted at someone who wants to learn to actually perform the accounting.

Now in its 13th edition, Nobes and Parker's Comparative International Accounting is renowned for its depth of discussion and comparative method of explaining the international dimensions of financial reporting. The book

explores the conceptual and contextual foundations of International Financial Reporting Standards (IFRS), contrasting them with US generally accepted accounting principles (US GAAP). It also examines international differences in IFRS practices and the accounting differences that remain between countries such as China, France, Germany and Japan. Particular attention is paid to the key issues of political lobbying, harmonization, and the special accounting problems of multinational companies. This new edition is thoroughly updated for the many changes in accounting and the relevant research published since the 12th edition. Among other things, this includes material on: Convergence of IFRS and US GAAP Adoptions of IFRS in many countries, both developed and developing Extensive new findings about international differences in IFRS practices New requirements for unlisted companies in many countries, sometimes based on IFRS for SMEs About the authors: Christopher Nobes is Professor of Accounting at Royal Holloway (University of London) and at the University of Sydney. He is adjunct professor at the Norwegian Business School. From 1993 to 2001 he was a representative on the board of International Accounting Standards Committee. Robert Parker is Emeritus Professor of Accounting at the University of Exeter, UK. He was formerly editor of the journal, Accounting and Business Research. Both authors are recipients of the American Accounting Association's 'Outstanding International Accounting Educator' award.
