From OUP Oxford : Society and the Internet: How Networks of Information and Communication are Changing Our Lives before purchasing it in order to gauge whether or not it would be worth my time, and all praised Society and the Internet: How Networks of Information and Communication are Changing Our Lives:

0 of 0 people found the following review helpful. I love the scholarly presentations By Jose YI am only half way through the book. I love the scholarly presentations. The topics covered are comprehensive and representative. 0 of 1

people found the following review helpful. Five StarsBy Charles McClainA great book!1 of 1 people found the following review helpful. A well-researched book deciphering concerns of Internet and SocietyBy Dr Anup K DasIn book titled "Society and the Internet: How Networks of Information and Communication are Changing Our Lives", edited by Mark Graham and William H. Dutton, different authors vividly discuss prospects, problems and challenges of the present-day networked society. The networked society is built upon interconnectedness of fascinating mobile and internet technologies. However, privacy and information security are compromised while naive users taking part in Web 2.0-enabled social web. This book divides into five parts, namely, I. Internet Studies of Everyday Life, II. Information and Culture on the Line, III. Networked Politics and Governments, IV: Networked Businesses, Industries and Economies, and V. Technological and Regulatory Histories and Futures. This book includes 23 chapters written by practitioners and researchers from different countries. This book contains a foreword written by Manuel Castells.

How is society being shaped by the diffusion and increasing centrality of the Internet in everyday life and work? By bringing together leading research that addresses some of the most significant cultural, economic, and political roles of the Internet, this volume introduces students to a core set of readings that address this question in specific social and institutional contexts. Internet Studies is a burgeoning new field, which has been central to the Oxford Internet Institute (OII), an innovative multi-disciplinary department at the University of Oxford. Society and the Internet builds on the OII's evolving series of lectures on society and the Internet. The series has been edited to create a reader to supplement upper-division undergraduate and graduate courses that seek to introduce students to scholarship focused on the implications of the Internet for networked societies around the world. The chapters of the reader are rooted in a variety of disciplines, but all directly tackle the powerful ways in which the Internet is linked to political, social, cultural, and economic transformations in society. This book will be a starting point for anyone with a serious interest in the factors shaping the Internet and its impact on society. The book begins with an introduction by the editors, which provides a brief history of the Internet and Web and its study from multi-disciplinary perspectives. The chapters are grouped into six focused sections: The Internet and Everyday Life; Information and Culture on the Line; Networked Politics and Government; Networked Businesses, Industries, and Economies; and Technological and Regulatory Histories and Futures.

About the AuthorMark Graham, Director of Research and Senior Research Fellow, Oxford Internet Institute, University of Oxford, William H. Dutton, Professor of Internet Studies, Oxford Internet Institute, University of OxfordMark Graham is a geographer and a Senior Research Fellow at the Oxford Internet Institute. He is also the Director of Research at the Oxford Internet Institute and a Visiting Research Associate at the University of Oxford's School of Geography and the Environment. William H. Dutton is Professor of Internet Studies at the University of Oxford's Internet Institute, and a Professorial Fellow at Balliol College.
