It's about timeBy Dr. Bob WrightIt's about time, a balanced approach to corporate accountability focused on stock options but giving clear principles that will direct the thoughtful board and officers to assure that their companies receive appropriate value for dollars spent.2 of 2 people found the following review helpful. Something to think aboutBy John J TrakselisThis is a book that will make you think about

who pays when executive compensation, principally in the form of stock options, is not in synch with with the law of supply and demand. The answer is that we all do: stockholders, employees, customers, suppliers and the general public. The author makes a compelling case that pay and incentives should be based on critical measures of company performance. It is not in our interest to create doubt about our corporate governance. Executive compensation planning needs to incorporate higher standards and we can no longer ignore whether stock options are an expense on the income statement. This book does a masterful job of laying out the most important considerations for the guardians of the corporate pocketbook. 0 of 0 people found the following review helpful. A Delightful Vision for Corporate Accountability By Michele Moore Gustin I am delighted to read an account of what is possible and how everyone wins as a result. This is such a positive book! As a woman business owner I am inspired that there are others who care about what big business is doing today, and by someone who has principles and the credentials to take it on. I applaud Mr. Delves!

"As a former CEO and independent director of several corporations, I find Don Delves' discussion of executive compensation -- including detailed and insightful reviews of the issues involving stock options -- to be exceedingly instructive. This is a book that members of compensation committees, indeed all corporate board members should read." -B. Kenneth West, Former CEO, Harris Trust and Savings Bank and member of several corporate boards. Guidelines for curbing today's stock option abuses, and making "payment for performance" the new imperative. Stock options account for up to 90 percent of the average CEO's compensation--despite a falling stock market and often plunging corporate earnings. Stock Options and the New Rules of Corporate Accountability examines this hot-button issue, proposing new methodologies and techniques for better aligning stock options, executive compensation, performance rewards, and accounting, and making sense of what has become today's most controversial form of compensation. Executive compensation authority Don Delves explains how high-profile corporations like GE and Coca-Cola have opted to expense stock options and have adjusted their policies to prevent options from becoming disincentive tools, and he shows others how to follow suit. In addition, Delves gives decision makers the knowledge they need to: Increase accountability by treating stock options as expenses. Balance options with other incentives. Create healthier contracts between employers and employees.
